Java adopts the so-called "Event-Driven" (or "Event-Delegation") programming model for event-handling, similar to most of the visual programming languages, such as Visual Basic. In event-driven programming, a piece of event-handling codes is executed (or called back by the graphics subsystem) when an event was fired in response to an user input (such as clicking a mouse button or hitting the ...

Systems programming means programming for a stand-alone application, such as a video game run on your machine. The two most common languages for game designers to learn are C++ and Java, although other languages are popular (such as C# for Unity).. Another type of programming you may hear referred to is scripting, but that essentially comes down to a type of systems programming.
