In mathematics, for given real numbers a and b, the logarithm $\log_b a$ is a number x such that $b^x = a$. Analogously, in any group G, powers b^k can be defined for all integers k, and the discrete logarithm $\log_b a$ is an integer k such that $b^k = a$. In number theory, the more commonly used term is index: we can write $x = \text{ind}_r a \pmod m$ (read "the index of a to the base r modulo m") for $r^x \equiv a \pmod m$.
