Diagnostic accuracy studies are, like other clinical studies, at risk of bias due to shortcomings in design and conduct, and the results of a diagnostic accuracy study may not apply to other patient groups and settings. Readers of study reports need to be informed about study design and conduct, in sufficient detail to judge the trustworthiness and applicability of the study findings.

Current guidelines recommend that all traumatic hemothoraces be drained with tube thoracostomy. However, threshold volume for which drainage is necessary, size of the catheter used for drainage, use of intrapleural thrombolytic therapy vs. video-assisted thoracic surgery (VATS) for retained hemothorax, and timing of VATS (early vs. late) remain unknown. Patel 1 and colleagues from the Eastern ...
